

INTRODUCTION

Here we are at our "LUCKY 13" edition and this time we are featuring a new import, the SOMMERKAMP TS-788DX. See the feature story for full details. I'm sure you will be impressed.

Our FM Kit is now available. It comes with instructions on how to add an AM/FM selector switch for either mode of operation. It will work on any set that has a V.C.O. and a 455KC intermediate frequency (I.F.). It is also relatively easy to install.

We have a new thumbwheel conversion for the 858 SSB chassis which reads the output frequency directly off the switches. No more charts. Also we are currently working on a compact 6 digit programmable frequency counter/display which is adaptable to any unit. Watch for this one - it will be hot!!!!!!!!!!!!!!

Looks like there will be no more CB schematics published by SAMS. We maintain a file of schematics on anything we can get our hands on. If you have a schematic of a hard to find unit, send us a good photocopy of it. We will function as a Clearinghouse and supply a schematic of anything we have on file (which is not copy righted, of course) for a nominal copying/shipping/handling fee.

For anyone with a "parts supply" problem, we have a modest inventory of popular values of resistors, capacitors, switches, etc. Call us at 512-992-1303 for prices and special requirements. Phone orders are accepted Mon.-Fri. 9AM-6PM CST.

Till Next Time,

Cic Richter
