

INTRODUCTION

A special thanks to our good friend, William G. Wentz, Jr., with his help we have been able to complete this Volume 16. All of our SECRET CB friends have been fantastic. With your patience and help we made it thru the past 6 months without a technician.

Because you all have waited so long for this volume we have packed it full. Bill and I know you are going to enjoy it.

Our "New Product Release" is about a new low kit for the TC9106, LC7130/7131, and uPD2814/2816C PLL Chips that also use a 10.7 ceramic or crystal filter in their receiver section.

There has been some installation problems with the VSB-1 (Kit #102) into the Cobra 2000 GTL. Included in this issue is some special hook-up instructions which solves the problem.

In this issue we have included the updated installation procedures for the Digital Processor Kit #146 and also the frequency chart.

Be sure to read about our NEWSLETTER and let us hear from you - pro or con!

When sending data in for Secret CB please print/give chassis #/ PLL type/ and especially PLL pin #'s.

Many thanks again to all of you who read and contribute to SECRET CB. We do appreciate all the information and helpful hints - KEEP THEM COMING. Volume 17 will be out sooner than you think! Scheduled for release in September.

Always Sincerely yours,

Doris Selman
